

SESSION ORDERS in the POS

Session orders aid the window worker in the case there is confusion about a recent, previous, order. This function allows for a quick look back at orders that have been completed on that particular iPad during the current session. **NOTE: If you exit the POS, the Session Orders are cleared. These are ONLY stored in the current session.**

1. While in the POS, you will see a “Session Orders” column on the left side of the screen.

2. Tap on the order in question. **NOTE: If you ring up an order and don't type a name or ticket number in the "Name" field at time of check out, it will show up in the "Session Orders" column under "No Name."**

3. The order is displayed. Once finished, tap the “Back” button.

11:59 PM Fri Mar 18 405 Test League - Test Concession
